

# MC-100 Workflow

## How it works

### 1. Present

- ✓ Speaker gives presentation as normal
- ✓ Speaker may use PowerPoint slides, visit web pages or display other graphics

### 2. Capture

- ✓ As the speaker presents – audio, video, and images are captured by the MC-100

### 3. Record & Monitor

- ✓ The MC-100 Operator Console software automatically records and synchronizes audio, video, images
- ✓ An event operator can monitor the presentation to ensure everything is working

### 4. Edit & Publish

- ✓ Once the presentation has ended, you may add, edit, remove or rearrange slides and fine-tune the presentation for final viewing
- ✓ All slide materials including slide text or transcripts can be indexed for easy presentation navigation and full-text search

### 5. View Presentation

- ✓ Once published, rich media presentations are viewable within a standard web browser
- ✓ View audio/video playback alongside synchronized slides and images
- ✓ Search entire presentation by keyword or phrase
